### What Does a Passcode Lock Do?

The **Passcode Lock** is primarily used on teacher devices to keep students, or other users, out of an iPad altogether. When the passcode lock is turned on, users are asked to input a passcode before they can open apps, view photos, or interact with content on the device.

### What Does the Restrictions Lock Do?

If enabled, **Restrictions** operate in the background to prevent users from changing selected settings such as being able to add/delete apps, access the camera and more. Since these changes can be subtle, you may not even realize that Restrictions are enabled on your device.

### Turn Off Passcode Lock

1. Enter the device’s Passcode to unlock the device
   - **Note:** If you do not know the passcode, visit [https://goo.gl/rrpkFa](https://goo.gl/rrpkFa) to learn how to erase and reactivate a locked device.

2. **Settings**

3. **Older Software:** Tap General, then Passcode Lock  
   **Newer Software:** Tap Touch ID & Passcode

4. Enter the device **Passcode**

5. **Tap Turn Passcode Off & enter the Passcode again.**

### Disable Restrictions

1. **Settings**

2. **General**

3. **Restrictions** – If set to “off” then you do not need to take any further steps. – If set to “on” continue with the remaining steps below.

4. **Enter the Restrictions Code** that you originally used to enable restrictions. This could be a completely different code than the one you may have used as a Passcode lock, as the two locks operate independently.
   - **Note:** If you do not know the Restrictions Lock, visit [https://goo.gl/rrpkFa](https://goo.gl/rrpkFa) to learn how to erase and reactivate a locked device.

5. **Tap Disable Restrictions & enter your Restrictions Code again.**
