What is Grouping?
Grouping is a way to take multiple objects on a Notebook page and combine them into a single object. This makes it easy to resize objects in direct proportion to each other as well as prevent the accidental dismembering of an object created from multiple parts on the screen. Grouping is done through the object drop-down arrow. With the release of SMART Notebook 11, grouping can also be done through gestures (shaking your hand quickly on the selected objects) on the SMART Board.

How to Group
1. Select all the objects you wish to group
2. Click the object drop-down arrow
3. Go to Group
4. Click on Group

What is Flipping
Flipping allows the user to reserve the appearance of an object on a Notebook page. An object can be flipped either Left/Right or Up/Down. This is useful for showing inversions of an object or simply to make a plane appear to be going the opposite direction.

How to Flip
1. Click the object you wish to flip
2. Click the object drop-down arrow
3. Go to Flip
4. Click the desired flipping command
