Image Transparency

What is Image Transparency?
Set Image Transparency is an option available on the object drop-down arrow. Transparency allows the user to remove specific parts from an image by making them invisible (transparent). This is a useful feature for removing background colors from an image or an entire object from an image (if the coloring is simple).

Using Image Transparency
1. Select the object
2. Click on the object drop-down arrow
3. Click on “Set Image Transparency”
4. Click on the portion(s) of the image you wish to make transparent
5. Click OK
