Most of the options on the object drop-down arrow are the same with any Notebook object, however, there are three additional options for tables.

**Add Table Shade** – adds a removable shade to each cell of the table. Click on the cell to reveal the contents of the cell. Similar to the screen shade, but only for table cells.

**Remove Table Shade** – removes the table shade from all cells.

**Adjust Size** – allows for automatic adjustments of the table based on the following options:
- **Make same height** – makes all rows of the table the same height.
- **Make same width** – makes all columns of table the same width.
- **Make same size** – makes all columns and rows the same size based on current size of the table.
- **Make cells square** – makes all cells square in shape based on the largest width or height of existing cells.
