Passcode Lock

Start at settings and select passcode.

It will prompt you to enter a 4 digit passcode. This is the code you will type to unlock your iPad.

Once you have the passcode set, you can protect yourself even further by enabling the Erase Data feature. After 10 unsuccessful attempts to log in, it will wipe the iPad clean. **Use caution** with this! Once it is wiped, there is no way to get the information back.

Restrictions

To get to restrictions, start at settings, and choose **General**.

Tap on restrictions and set a passcode. Even if you do not plan on enabling any of the restrictions, **we recommend that you set a passcode**. By setting the code up yourself, you prevent the opportunity for someone else to set a code that you do not know.

Points to Ponder-
- By disabling **Deleting Apps**, your students will not be able to accidentally delete an app from the iPad.
- Consider whether or not your students will need to use the camera.
